

**Problem:** Content Blocks know very little about where they are in the folder structure.

**Problem:** There's currently no good way to "cascade" settings down the tree to the content below.

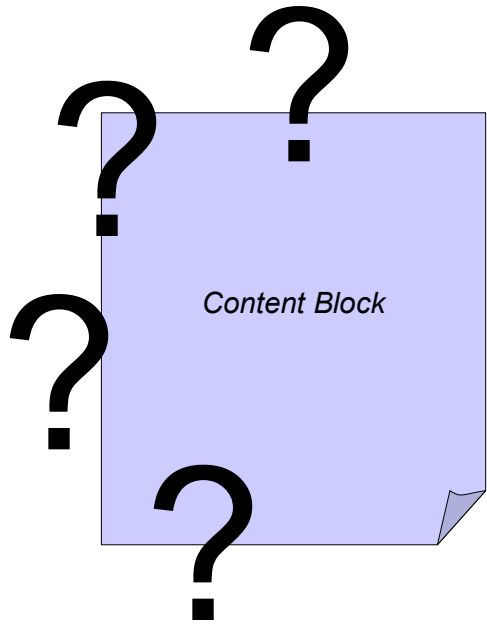

*What's the name of folder you're located in?*

*Are you somewhere underneath the Collections folder?*

*How deep in the tree are you?*

*What menu should I use in the sidebar when I display you?*

**Problem:** *Templates have "questions" that they need answered when rendering content. Right now, Content Blocks have no way to answer these questions.*

*I have no idea.*
